

HAN YU KYAW

Data Analyst

hanyu9217@gmail.com | Japan

PROFESSIONAL SUMMARY

Results-oriented Data Analyst with hands-on experience in Python, SQL, PostgreSQL, Excel, Power BI, and R. Currently analyzing member-profile data and developing interactive dashboards, with additional end-to-end projects in customer sentiment analysis, sales forecasting, and hospitality analytics. Translates complex data into clear, actionable insights for business and product stakeholders.

TECHNICAL SKILLS

Languages & Databases	Python SQL PostgreSQL R JavaScript
BI & Visualization	Power BI Excel (Advanced) Streamlit Tableau IBM Cognos
Core Skills	Data Cleaning EDA Dashboard Development Forecasting KPI Reporting Text Classification
Domain	Hospitality Analytics Tourism Data Member Analytics Customer Experience
Web	HTML CSS JavaScript

WORK EXPERIENCE

Data Analyst Intern | *Alliz* Aug 2026 - Present | Remote

- Connected Python and SQLAlchemy workflows to a read-only PostgreSQL database and analyzed 826 completed member profiles across biography, profession, and education tables.
- Classified free-text goals, needs, opportunities, and industry interests through rule-based keyword and frequency analysis.
- Developed a Streamlit dashboard prototype with cached data loading, interactive filters, category summaries, and top-keyword views to communicate member needs.

World Ambassador | *Beppu City Hall* Jun 2026 - Present | Beppu, Japan

- Visit junior high schools across Beppu as a city-appointed ambassador, supporting English learning and international education.
- Facilitate English activities and cross-cultural presentations that help students build communication confidence and global awareness.

Operations & Guest Experience Intern | *ANA Crowne Plaza Hotel Kobe* Aug 2025 - Sep 2025 | Kobe, Japan

- Observed and documented hotel service workflows, compiling guest feedback patterns that informed a personal analysis of satisfaction drivers across 3 service categories.
- Supported front-of-house operations in a 300+ room international luxury hotel, developing deep domain knowledge in guest satisfaction measurement and hotel performance metrics.
- Communicated daily with guests from 10+ countries, building cross-cultural communication skills directly applicable to stakeholder data presentation.
- Applied hospitality domain knowledge to independently analyze guest review data as a follow-on academic project, identifying 5 key satisfaction drivers.

PROJECTS

Kyoto Hotel Guest Sentiment Analysis

Python | Excel | NLP

Analyzed 500+ hotel reviews to uncover actionable insights for hotel operators in Kyoto's competitive tourism market.

- Cleaned and preprocessed unstructured review text data in Python (pandas, NLTK), reducing noise by 30% for more accurate downstream analysis.
- Identified top 5 guest satisfaction drivers (cleanliness, staff service, location, price-value, amenities) using frequency analysis and keyword extraction.
- Built an Excel dashboard visualizing sentiment trends by hotel tier, enabling comparison across budget, mid-scale, and luxury segments.
- Surfaced insight that price-value perception was the #1 complaint driver for 3-star hotels — finding directly applicable to revenue management strategy.

Annual Retail Sales Performance & Forecast Report

Python | Excel | Statistical Modeling

Built a full-cycle sales analytics report covering trend analysis, KPI tracking, and a 2024 revenue forecast.

- Processed 12 months of transactional sales data, performing cleaning, aggregation, and outlier detection in Python.
- Developed a time-series forecast model projecting 2024 sales with monthly granularity, informing inventory and staffing planning decisions.
- Produced 8-slide management report with clear data visualizations translating statistical findings into plain-language business recommendations.
- Tracked 6 KPIs including YoY revenue growth, average order value, and category contribution margin.

Student Enrollment Management System

HTML | CSS | JavaScript | SQL

Designed and built a functional web-based system to streamline student registration and data management.

- Built a full-stack enrollment interface with structured input forms, validation logic, and data organization for 200+ student records.
- Applied data management principles to ensure input accuracy, reducing duplicate entry errors through front-end validation rules.

EDUCATION

Bachelor of Sustainability and Tourism | *Ritsumeikan Asia Pacific University*

Expected Sep 2027 | Japan

- Relevant coursework: Business Analytics, Research Methods, Sustainable Tourism Management, Data-Driven Decision Making.

CERTIFICATIONS

- Japanese-Language Proficiency Test (JLPT) N1 — *Japan Foundation / JEES*
- DA0100: Data Analytics Basics for Everyone — *IBM*
- DV0130: Data Visualization & Dashboards with Excel and Cognos — *IBM*
- DA0130: Analyzing Data with Excel — *IBM*
